# Workflows and automation for Bitbucket

3 Simple steps to automate pull request workflows

You know how important it is for code quality, performance and stability to review code via pull requests in Bitbucket ... and to get the right people to review and approve

1 Predefined reviewers and groups with file/module level granularity

Only invite the reviewers that really matter to create a constructive conversation and avoid pull-request overwhelm for the team.

UI team
- client/app
- actions
- filters.ts

QA team
- test
- node
- test.ts

2 Controlled and automatic pull request merge process

Workzone can merge pull requests automatically when all or a percentage of reviewers and groups have approved, or block merging until all merge conditions are met.

PULL REQUEST

3 Compliance and certification built-in

Workzone digital signature approval and automated reviews satisfies all major compliance standards for your software change management process.

TOP10 · PCI · SOC · FDA COMPLIANCE · SAFe PROVIDED BY SCALED AGILE
