Finance and Accounting Function SaaS Portfolio

Created by Leah Tubb
Last updated: just a moment ago • 2 min read • Analytics • No updates

1 This page documents applications and services in the Finance / Accounting business (function) capability application portfolio. This list of applications comes from the SaaS Management Platform (SMP). Utilization is based off of SAML-based SSO or OAuth. Our SMP integrates with our financial management platform to identify AP or Expensed applications.

The objective of this page and its maintenance is to highlight and report on what is managed by IT and what is not managed by IT or in "Shadow IT" and acquired by the business. Additionally, it should feed the efforts to have a rational portfolio for a given business capability.

Cost are based on annual amounts and are rounded and not exact.

Portfolio Management

Business Function / Capability	Finance and Accounting
IT Management Stakeholders	
Business Stakeholders	
Enterprise Architect	
IT Strategy & Planning	

IT Managed Applications

This list of applications are managed by IT and acquired thru procurement and SBCR process. They are also included in our enterprise architecture solution source of truth.

Application	Business Capability	Est. Costs	Status	Notes / Actions (if any)

Non-IT Managed Applications

The list of applications below are not managed by IT and typically acquired by business either thru the standard procurement and SBCR process, or by credit card and expensed. Actions for the list below should reflect on what data (and data classification) is used by the service and if any integrations exist. Also, whether the application should be managed by IT, decommissioned, or no change.

Business stakeholders and / or IT Management stakeholders should update below and add relevant notes or actions.

Application	Business Capability	Est. Costs	Status	Data	Notes / Actions

Demo - Application Resilience Policy Check

The screenshot shows a web browser window with the URL `atlassian-on.atlassian.net/servicedesk/customer/portal/14/group/52/create/181`. The page is titled 'Help Center' and 'Application Resiliency'. It contains a form to raise a request for the AppRes team. The form includes a dropdown for 'Raise this request on behalf of' (set to Cathi Davey), a 'Service Tier' dropdown (set to 'Search for Insight objects'), and a 'Target Quarter' dropdown. At the bottom, there are 'Send' and 'Cancel' buttons. The footer indicates 'Powered by Jira Service Management'.
