

DevOps Toolchain Optimization

Improve engineering quality and reduce time to market

To maintain a competitive edge in today's market, your DevOps team needs to build and deliver innovative, quality solutions, faster. Tightly integrated, easy-to-use tools are at the heart of the the highest performing DevOps teams, making it an important area for you to assess and fine-tune. Atlassian's DevOps Toolchain Optimization provides the critical information you need to transform your DevOps toolchain and team.

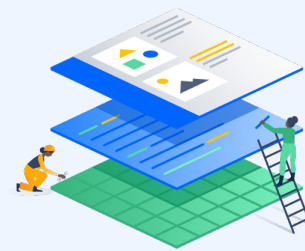

Atlassian's DevOps Toolchain Optimization is a specialized service designed to:

- Identify opportunities to automate tasks to reduce time to delivery
- Pinpoint integration opportunities between tools to improve developer productivity
- Discover opportunities to replace proprietary built software with purpose built off-the-shelf software to reduce maintenance and support costs
- Modernize your CI/CD pipeline to improve developer satisfaction

The Toolchain Optimization is right for your organization if you have:

- Manual or duplicate tasks in your current development, testing, monitoring, and reporting processes, resulting in long lead times for product releases
- Frequent security vulnerabilities identified in production
- Unhappy or frustrated development teams, leading to higher attrition

Overall expected outcomes

Tailored recommendations to enhance your DevOps tools, leading to:

- Reduced maintenance and support costs
- Shorter product delivery time
- Less context-switching
- Improved developer satisfaction and productivity
