

Looking for the Test Management Tool inside Jira with all the best features and assured ROI?

Available on

QMetry Test Management for Jira (QTM4J) offers complete test management capabilities to Agile and DevOps Teams inside Jira at the most competitive price

Deliver better business outcomes with BDD driven testing

QTM4J is built to provide seamless one tool experience of test management inside Jira and still having architecturally independent design to add better usability, UI, speed and integration possibilities. QTM4J is intuitive, powerful and light weight test management to provide an ALM experience for agile team members such as BA, Testers, Jira admin, PM to work in the comfort of the same Jira Interface. This is the only tool within Atlassian Marketplace offering embedded Exploratory Testing that enables easy test case documentation. QTM4J is also the only tool to provide the most advanced and comprehensive analytics with 30+ reporting gadgets inside Jira.

Core Features

✓ Powerful Test Authoring capabilities right inside Jira

Create, link & track test cases right inside the Jira; ensuring reusability and auditing. QTM4J manages test cases through versioning, test data parameterization, custom fields & workflow customization. It ensures Jira Story Traceability by viewing which stories are linked to a test case.

Set device to Walk mode

✓ Test Cycles & Test Plans for Faster Execution

QTM4J enables planning & tracking of release with Test Plans. Testers can smartly record executions with Test Cycles which combined forms Test Plans. Testers can execute test case multiple times while preserving the details of previous executions. View Test Cycle execution summary right from Test Cycle.

✓ Most Advanced & Comprehensive Reporting in Jira

With 30+ report gadgets, make informed decisions using Coverage Analytics, Test Cycle Reports and Traceability reports. Leverage QTM4J Analytics to get real-time visibility across projects and teams. Build customized dashboard widgets and release more confidently by using executive coverage, reusability and many other report types.

✓ Effortless & Intuitive Interface

QTM4J organizes all the artefacts in a folder-based hierarchy. Bulk operations such as copy, move, clone, archive to ensure easy and fast access. QTM4J allows quick updates with inline edits and Wiki mark-up editor. All the artefacts can be quickly searched by applying filters; saving filters as Public/Private and sorting the results.

✓ Integration and Automation Support

The tool allows easy integration with all major test automation and CI/CD frameworks. It provides native BDD support with Bitbucket, GitHub, and GitLab using Gherkin Editor. Easily import your automation test results directly into Jira, by integrating with CI/CD tools like Jenkins and Bamboo, and test automation frameworks like QAF, Junit, TestNG, Cucumber, Appium, etc.

Automation API

Import your automation results in simple steps!
