

55degrees

Be predictable.
Be confident.
Be agile.

Powerful solutions
that take you from
busy to **effective...**

55 Degrees is a platinum Atlassian marketplace partner offering agile Jira apps that help people and companies forecast, plan, work and, improve more effectively.

Located in Malmö, Sweden. Trusted globally by 1600+ companies.

We put security first

- ✓ ISO 27001:2013 Certified
- ✓ Bug Bounty program participant
- ✓ GDPR-Compliant

Our customers rave about our support

- ✓ 24hr response time, 5 days a week
- ✓ Customer Success Program
- ✓ Community Site
- ✓ 5/5 star rating for the past 2 quarters
- ✓ Detailed product documentation
- ✓ Videos and courses available

A suite of world-class charts and simulations for flow metrics.

Understand how work really moves through your process so you can ask the right questions, drive meaningful improvement, and accurately forecast outcomes in uncertain situations.

How long will this take?

Know the odds with our Cycle Time Scatterplot. At a glance, see how long it took to finish past work and how long it's likely to take in the future.

When will our project be done?

With our Monte Carlo Simulations you can forecast fixed date or fixed scope efforts with your desired level of certainty. Then see how risks can affect your forecast.

Can we be more predictable?

Unhappy with your data or forecasts? Our charts give you insights to stabilize your process, become predictable, and improve your forecasts.

“ActionableAgile has been a game changer for my teams and career. I went from experimenting with team metrics in my two teams to rolling it out to all 70+ teams in the organization. Teams started optimizing their processes, and Jira usage improved as they understood that the data quality mattered for generating valuable insights. Teams could know their pace and capacity better, and the ability to deliver improved considerably. The focus shifted from starting work to getting work done. I became a big advocate for ActionableAgile ever since it became one of the most important tools in my toolbox.”

ActionableAgile User, Head of Agility at one of the industry-leading organizations.

Portfolio Forecaster

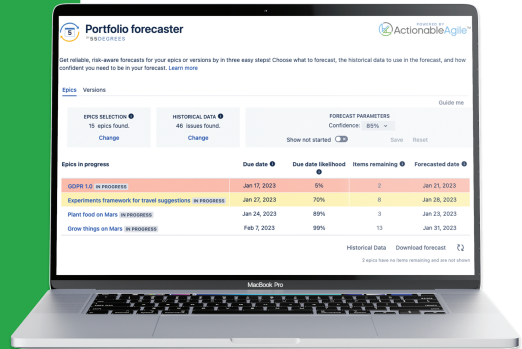

Epic and version forecasting for Jira

 CLOUD FORTIFIED

Risk-aware, up-to-date forecasts for your Jira epics and versions

using your historical data and risk tolerance combined with our Monte Carlo Simulations

Create forecasts in minutes

After making a few simple configurations, you can generate a forecast you can revisit as time and work progress.

Control risk in your forecast

Absolute certainty is a myth. But, tell us how certain you really need to be and we provide a matching forecast!

Answer "What If?"

See how the forecast might change if you were to work on more, work on less, or change priorities.

ALREADY INTERESTED?

Just wait until you see what's next!

In our next release, Portfolio Forecaster will move from a place for individuals to create private forecasts in each project to a central app that everyone can access.

- ✓ Create teams and generate forecasts.
- ✓ Set up portfolios showing forecasted information from multiple teams
- ✓ Get insights on how forecasted dates in a team's forecast have changed over time and why

Koppla

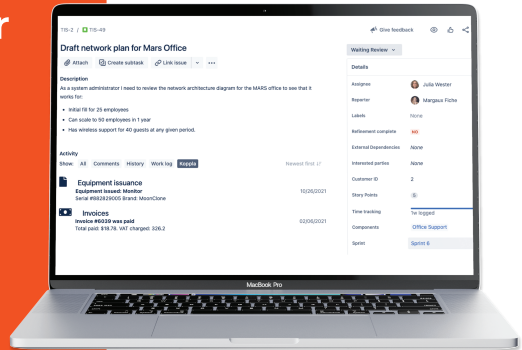

External Data Connector for Jira Cloud

✓ CLOUD SECURITY PARTICIPANT

See key data from external systems directly in your Jira issues

Koppla is a lightweight external data connector that makes it easy to see all the information you need to do your work in one place. Improve speed and reduce stress!

Reduce context switching

Always switching between systems? We let you show information related to your issue directly on your issue.

Improve speed and quality

Every time you have to switch between systems you lose concentration and valuable time. We remove those interruptions so you can finish great work quickly!

Keep your data secure

We know that data can be sensitive. Configure each data source separately and ensure Jira users see only what they are allowed to.

HOSTED ON ATlassian FORGE

Keep your data footprint small and secure

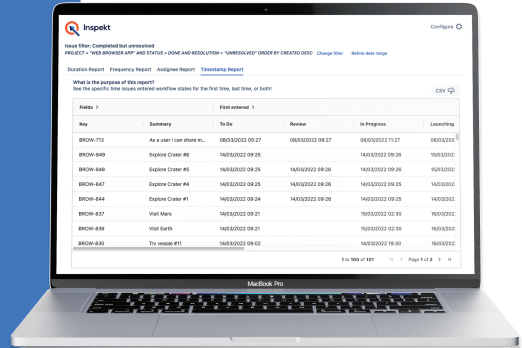

You already store data in Atlassian Jira and the external data systems you want to connect it with. You don't need to store it anywhere else!

Using Atlassian's Forge platform, the external data stored to show in the Jira issue stays on Atlassian. 55 Degrees doesn't store your work data.

Giving you access and insights to hard-to-reach Jira data

We scour your issue history so you can understand how issues move through workflows, their cumulative time in status, where they get stuck, and how long they sit idle.

Understand problems

Our filter-based reports show when issues move into a status and the cumulative time spent as well as how often they go to a status and how many assignees they have so you can improve how you work.

Streamline Jira workflows

Our project-based workflow usage pattern report shows you how issues move within workflows. When they leave a status, where do they go next? Are certain statuses rarely used? Use this information to streamline your workflow or educate users!

Focus your improvements

Our project-based flow efficiency report shows the percentage of time issues are idle. See overall or by priority, issue type, and more. Decide how to spend your limited improvement time and money!

HELP ME DECIDE

Inspekt, ActionableAgile or both?

Inspekt gives you unprecedented access to raw data that is unavailable elsewhere. With Inspekt, you can see how items move between workflow statuses and choose which calculations to see from that data. In contrast, we make those decisions for you in ActionableAgile™ to achieve the intent of helping you optimize flow.

Using both is a winning combination! You can work on flow optimization with ActionableAgile while letting Inspekt help you delve into problem issues and better understand where your workflow itself can be improved.

Klar

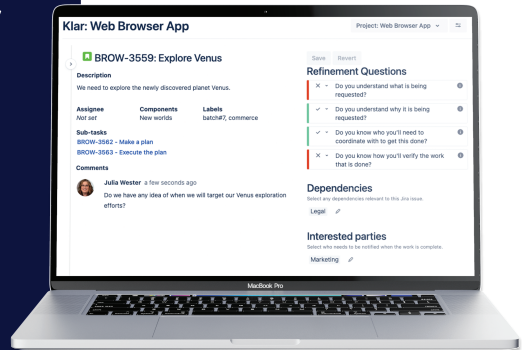

Issue Refinement for Jira Cloud

✓ CLOUD SECURITY PARTICIPANT

Gain clarity and speed. Ditch the frustration of preventable blockers.

Klar is a lightweight issue refinement tool for Jira Cloud that helps teams understand their work, who work is dependent on, and who needs to stay up-to-date as work progresses.

Get ahead of dependencies

Unmanaged dependencies are a huge factor in blocked and late work. Capture dependencies during refinement even if the Jira issues aren't created yet so you can coordinate early and often.

Have better conversations

Keep track of interested parties with a simple JQL search, you can find all the issues you need to discuss with any party. Never forget any issue to discuss so everyone is always in the loop.

Prevent avoidable blockers

Answer a relevant set of questions for each Jira issue to ensure you know what you're doing, why you're doing it, and that you've avoided common reasons that work gets blocked.

HOSTED ON ATLASSIAN FORGE

Keep your data footprint small and secure

You already store data about your work items in Atlassian Jira. 55 Degrees doesn't need to join that party.

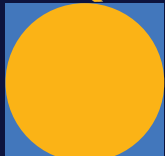

Using Atlassian's Forge platform, the information you add during refinement stays in Atlassian Jira.
