

IT service management that unlocks high-velocity teams

Business Challenges

In the midst of rapid transformation, IT teams need to build capabilities that enable the rapid delivery of great services, while managing costs and risk. But, progress is constrained by the old ways of working. Rigid processes limit team agility and speed. Disparate, disconnected tools interrupt the flow of information that accelerates good decision making. Development and operations teams continue to fight through siloed tooling that's critical to enabling a high-performing digital business.

Solution Overview

Jira Service Management unlocks IT at high velocity. Rapidly bring together development, IT operations, and business teams to deliver, operate, and support exceptional service experiences

Deliver value fast with empowered teams

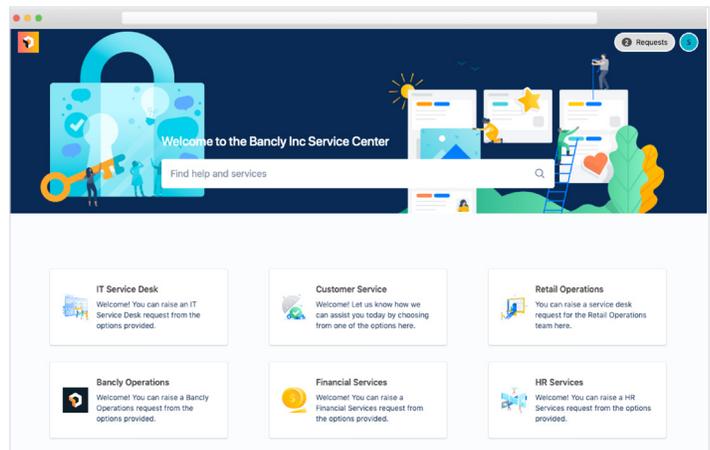

🔗 Deliver value fast without the cost, complexity, and one-size-fits-all approach of legacy ITSM tools. Empower teams with flexible processes and intuitive workflows that match the way they work, while still being standardized on a global platform for the business.

Make work visible

🔍 Bring visibility to work with an open, collaborative platform across IT operations, development, and business teams. Get rich, contextual information for better teamwork and faster decision making for requests, incidents, problems, changes, and more.

Increase flow from Dev to Ops

🔄 Break down silos and accelerate the flow of work by putting development and operations on an integrated platform – built on Jira – to speed requests from delivery to support.
