Grafana-based Monitoring as a Service

Logz.io Infrastructure Monitoring is a cloud-native, easy-to-use metric collection, storage and visualization solution built with Grafana. Logz.io enables engineers to quickly and efficiently identify, investigate, and resolve production issues in distributed environments with the Grafana visualization and analytics interface they already know and love delivered as SaaS and unified with a powerful log analytics engine for fast correlation and smarter investigative work. Logz.io Metric Monitoring increases developer productivity and enables DevOps teams to find and resolve production issues 60% quicker, improving the reliability of business-critical applications while decreasing the costs of maintenance.

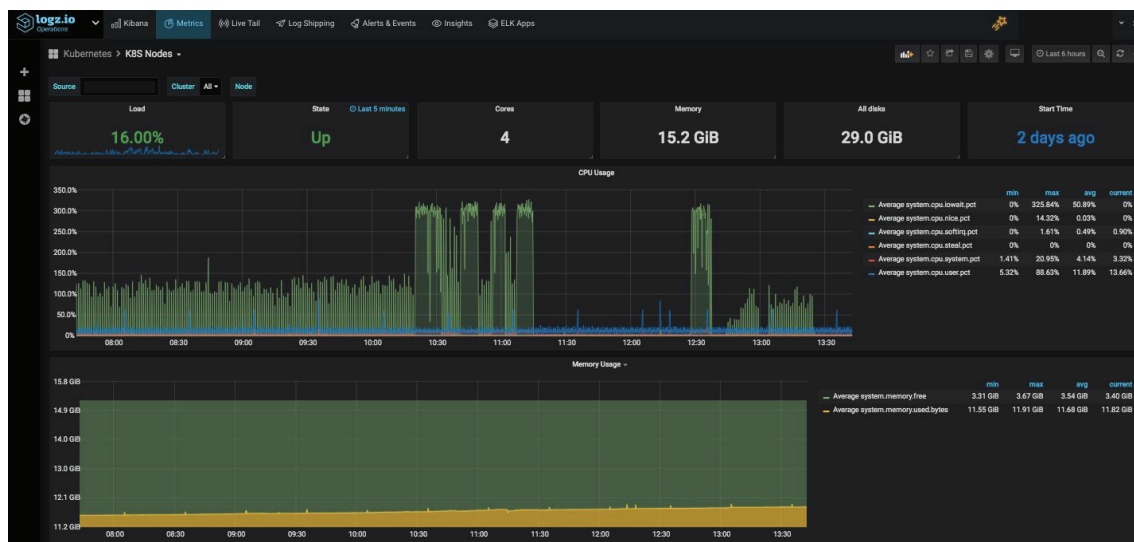

Key Benefits

- **Best of Breed Open Source**
Monitoring made easy. Based on the de-facto standard open source monitoring tool - Grafana, provided as a fully managed cloud service.
- **Built for Kubernetes & Cloud**
Designed to scale with your data and bundled with easy integrations and pre-made monitoring dashboards for any data source.
- **Faster Investigative Workflows**
Correlation between metrics, logs, and other signals for unifying monitoring workflows and faster root cause analysis.

Logz.io helps give us a much more accurate picture and enables us to provide our customers with higher responsiveness and an increased ability to resolve issues.

Lian Yagoda, Customer Support Engineer at Sisense

Advanced Monitoring Features

- Fully Managed Service**
 leverage Grafana for monitoring and data analysis without the need to manage infrastructure, data pipeline, or storage
- Integrations**
 built-in for any data source to start monitoring applications immediately
- Dashboard library**
 choose from a library of pre-made Grafana dashboards
- Real-time alerting**
 set rules, get notified and respond in real-time when production issues occur
- Smart correlation**
 easily drill down from metrics to troubleshoot logs for that event in Kibana
- Data Optimization**
 retain data efficiently for worry-free time-series analysis
- Audit Trail**
 monitor actions being performed in your account
- API**
 programmatically access your data, configure alerts and gain insights!
- Security & compliance**
 SOC-2 Type 2, HIPAA, ISO-27001, GDPR and PCI Level 1

Logz.io goes far beyond technology - they are focused on the problem of improving our cloud operations, which is central to our business. They have built their platform specifically for the continuous deployment environment that has emerged in recent years, making event correlation lightning fast as well as changing the business dynamic of data, volume-based services.

Troy Washburn,
 Director, DevOps & Cloud Solutions at Rent-A-Center

Logz.io is an intelligent observability platform built on open source and designed to empower modern DevOps teams to monitor, troubleshoot, and secure distributed cloud workloads more effectively. Engineering driven companies like VMWare, ZipRecruiter, and Unity use Logz.io to simplify monitoring and security workflows, increasing developer productivity, reducing time to resolve issues, and increasing the performance and security of their mission-critical applications.
